# First Year BE SCHEME \& SYLLABUS 

(COMMON TO ALL BRANCHES)

## MOTTO

Service and Excellence

## VISION

To be a global premier Institution of professional education and research

## MISSION

- Provide opportunities to deserving students of all communities, the Christian students in particular, for quality professional education
- Design and deliver curricula to meet the national and global changing needs through student-centric learning methodologies
- Attract, nurture and retain the best faculty and technical manpower
- Consolidate the state-of-art infrastructure and equipment for teaching and research activities
- Promote all-round personality development of the students through interaction with alumni, academia and industry
- Strengthen the Educational Social Responsibilities (ESR) of the Institution

## ST JOSEPH ENGINEERING COLLEGE

An Autonomous Institution
Vamanjoor, Mangaluru- 575028
Affiliated to VTU-Belgaum \& Recognized by AICTE NBA-Accredited: B.E. (CSE, ECE, EEE, ME, CIV) \& MBA NAAC - Accredited with grade A+

# I - BE <br> SCHEME \& SYLLABUS 

## COMMON TO ALL BRANCHES

Choice Based Credit System (CBCS) and Outcome Based Education (OBE)

## AUTONOMY AND ACCREDITATION

St Joseph Engineering College (SJEC) is an Autonomous Institute under Visvesvaraya Technological University (VTU), Belagavi, Karnataka State, and is recognized by the All-India Council for Technical Education (AICTE), New Delhi. SJEC is registered under the trust "Diocese of Mangalore, Social Action Department".

The SJEC has been conferred Fresh Autonomous Status from the Academic Year 2021-22. The college was granted autonomy by the University Grants Commission (UGC) under the UGC Scheme for Autonomous Colleges 2018 and conferred by VTU. The UGC Expert Team had visited the college on 28-29 November 2021 and rigorously assessed the college on multiple parameters. The fact that only a handful of engineering colleges in the state have attained Autonomous Status adds to the college's credibility that has been on a constant upswing. Autonomy will make it convenient for the college to design curricula by recognizing the needs of the industry, offering elective courses of choice and conducting the continuous assessment of its students.

At SJEC, the Outcome-Based Education (OBE) system has been implemented since 2011. Owing to OBE practised at the college, SJEC has already been accredited by the National Board of Accreditation (NBA). Five of the UG programs, namely Computer Science \& Engineering, Mechanical Engineering, Electronics and Communication Engineering, Electrical \& Electronics Engineering and Civil Engineering and MBA programs, have accreditation from the NBA.

Also, SJEC has been awarded the prestigious A+ grade by the National Assessment and Accreditation Council (NAAC) for five years. With a Cumulative Grade Point Average (CGPA) of 3.39 on a 4-point scale, SJEC has joined the elite list of colleges accredited with an A+ grade by NAAC in its first cycle. The fact that only 5 per cent of the Higher Education Institutions in India have bagged A+ or higher grades by NAAC adds to the college's credibility that has been on a constant upswing.

The college is committed to offering quality education to all its students, and the accreditation by NAAC and NBA reassures this fact. True to its motto of "Service and Excellence", the college's hard work has resulted in getting this recognition, which has endorsed the academic framework and policies that the college has been practising since its inception. The college has been leveraging a flexible choice-based academic model that gives students the freedom to undergo learning in respective disciplines and a transparent and continuous evaluation process that helps in their holistic development.

Summer Internship-II: All the students admitted shall have to undergo mandatory internship of minimum 04 weeks during the IV and V semester vacation. Summer Internship shall be Carried Out - based on industrial/ Govt./NGO /MSME/ Rural Internship /Innovation/Entrepreneurship, Credited in V Semester. Internship shall be considered as a head of passing and shall be considered for the award of degree. Those, who do not take up/complete the internship shall be declared fail and shall have to complete during subsequent examination after satisfying the internship requirements.

Research/Industrial Internship - All the students admitted shall have to undergo a mandatory internship of minimum 24 weeks during the VII or VIII semester. Viva-Voce examination shall be conducted during VIII semester and the prescribed credit shall be included. The internship shall be considered as a head of passing and shall be considered for the award of degree. Those, who do not take up/complete the internship shall be declared fail and shall have to complete during subsequent examination after satisfying the internship requirements.
Research internship Students have to take up research internships at Centers of Excellence (CoE) / Study Centers established in the same institute and /or out of the institute at reputed research organizations / Institutes. A research internship is intended to give you the flavour of current research going on a particular topic/s. The internships serve this purpose. They help students get familiarized with the field, the skill needed the effort amount and kind of effort required for carrying out research in that field.

Note:

AICTE Activity Points to be earned by students admitted to BE/B.Tech/B. Plan day college programme (For more details refer to Chapter6, AICTE Activity Point Programme, Model Internship Guidelines): Over and above the academic grades, every student admitted to the 4 years Degree programme and every student entering 4 years Degree programme through lateral entry, shall earn 100 and 75 Activity Points respectively for the award of degree through AICTE Activity Point Programme. Students transferred from other Universities to fifth semester are required to earn 50 Activity Points from the year of entry. The Activity Points earned shall be reflected on the student's eighth semester Grade Card. The activities can be can be spread over the years, anytime during the semester weekends and holidays, as per the liking and convenience of the student from the year of entry to the programme. However, minimum hours' requirement should be fulfilled. Activity Points (non-credit) have no effect on SGPA/CGPA and shall not be considered for vertical progression. In case students fail to earn the prescribed activity Points, Eighth semester Grade Card shall be issued only after earning the required activity Points. Students shall be admitted for the award of degree only after the release of the Eighth semester Grade Card.

| Open Electives 1 \& 2 |
| :--- |
| Students can select any one of the open electives offered by other Departments except those that are offered by the parent Department |
| (Please refer to the list of open electives). |
| Selection of an open elective shall not be allowed if, |
| The candidate has studied the same course during the previous semesters of the program. |
| The syllabus content of open elective is similar to that of the Departmental core courses or professional electives. |
| A similar course, under any category, is prescribed in the higher semesters of the program. |
| Registration to electives shall be documented under the guidance of Programme Coordinator/ Advisor/Mentor. |

| Open Elective - 1 |  |  |  |  |  |  |  |

Project work: to an indivi 1 CIE procedure for Project Work Phase - 1:
(i) Single discipline: The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide.
The CIE marks awarded for the project work phase -1, shall be based on the evaluation of the project work phase -1 Report (covering Literature Survey, Problem identification, Objectives and Methodology), project presentation skill and question and answer session in the ratio 50:25:25.The marks awarded for the Project report shall be the same for all the batch mates.
(ii) Interdisciplinary: Continuous Internal Evaluation shall be group wise at the college level with the participation of all guides of the college. Participation of external guide/s, if any, is desirable.
The CIE marks awarded for the project work phase -1, shall be based on the evaluation of project work phase - 1 Report (covering Literature Survey, Problem identification, Objectives and Methodology), project presentation skill and question and answer session in the ratio 50:25:25.The marks awarded for the project report shall be the same for all the batch mates.
(i) Single discipline: The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide.
The CIE marks awarded for the project work phase -2 , shall be based on the evaluation of project work phase -2 Report, project presentation skill and question and answer session in the ratio 50:25:25.The marks awarded for the project report shall be the same for all the batch mates. (ii) Interdisciplinary: Continuous Internal Evaluation shall be group wise at the college level with the participation of all guides of the college. Participation of external guide/s, if any, is desirable. The CIE marks awarded fortheprojectworkphase-2, shallbebasedontheevaluationofprojectworkphase-2Report, project presentation skill and question and answer session in the ratio $50: 25: 25$. The marks awarded for the project report shall be the same for all the batch mates.

## SEE for Project Work Phase - 2:

(i) Single discipline: Contribution to the project and the performance of each group member shall be assessed individually in semester end examination (SEE) conducted at the department.
(ii) Interdisciplinary: Contribution to the project and the performance of each group member shall be assessed individually in semester end examination (SEE) conducted separately at the departments to which the student/s belongs to.
Internship: Those, who have not pursued /completed the internship, shall be declared as fail and have to complete during subsequent examination after satisfying the internship requirements.

| Engineering Mathematics - I |  |  |  |
| :---: | :---: | :---: | :---: |
| Code | 21MAT101 | CIE Marks |  |
|  |  | SEE Marks |  |
| Credits |  | 相 |  |
| Course Learning Objectives: <br> 1. To familiarize the techniques to engineering students. <br> 2. To equip the students with sta in solving advanced levels of | of calculus, <br> ndard conce problems in | ctor analysis <br> s and tools th eir discipline | alge <br> lp the ering. |
| Module-1 |  |  |  |
| Differential Calculus: Polar the tangent, angle of intersectio to the tangent, pedal equation. <br> Partial Differentiation: Pa derivative, differentiation of co learning using MATLAB. <br> Self-Study: Jacobians. Tracing | curves, angle on, length of <br> rtial derivat mposite and <br> g of Polar cu | between the he perpendicu <br> ves, Euler's mplicit functio <br> ves |  |
| Module-2 |  |  |  |
| Linear Algebra: Rank of matrices -Rank of a matrix by Echelon form, consistency of system of linear equations-homogeneous and nonhomogeneous equations, Gauss-Jordan and Gauss -Seidel methods. Eigenvalues and Eigenvectors-properties, largest Eigenvalue by Rayleigh's power method. Diagonalization of a square matrix of order two. Experiential learning using MATLAB. |  |  |  |
| Module-3 |  |  |  |
| Vector differentiation: Vector functions of a single variable, derivative of a vector function, velocity and acceleration, unit tangent. Scalar and vector functions, gradient of a scalar field, directional derivative, divergence of a vector field, solenoidal vector, curl of a vector field, irrotational vector, scalar potential. Physical interpretation of divergence, physical interpretation of curl. Experiential learning using MATLAB. Self-Study: Vector identities (for a vector field A and a scalar field $\phi$ ) $\operatorname{div}(\phi A), \operatorname{curl}(\phi A), \operatorname{curl}(\operatorname{grad} \phi), \operatorname{div}(\operatorname{curl} A)$. |  |  |  |

| Module-4 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Calculus: Rolle's Theorem (without proof), Mean Value Theorems (Lagrange's \& Cauchy's), Taylor's and Maclaurin's theorems with remainders, indeterminate forms and L'Hospital's rule (Exponential form only). Experiential learning using MATLAB. <br> Self Study: Maxima and minima for function of two variables. <br> 10 Hours |  |  |  |  |
| Module-5 |  |  |  |  |
| First order ordinary differential equations: Exact and reducible to exact, Bernoulli's equations, Application of ODE's - orthogonal trajectories, Newton's law cooling <br> Nonlinear differential equations of first order: Equations solvable for p and Clairaut's equation. Experiential learning using MATLAB. <br> Self Study: Application of DE to LR circuits. |  |  |  |  |
| Course Outcomes: At the end of the course the student will be able to: |  |  |  |  |
| 21MAT101.1 |  | Plot polar curve and find pedal equation for a polar curve. |  |  |
| 21MAT101.2 |  | Apply the knowledge of calculus to find partial derivative of different types of functions. |  |  |
| 21MAT101.3 |  | Compare the analytical method and iterative numerical methods of solving the system of equations. |  |  |
| 21MAT101.4 |  | Differentiate between solenoidal and irrotational vectors. |  |  |
| 21MAT101.5 |  | Compute Taylor's, Maclaurin's series expansion for function of single variable. |  |  |
| 21MAT101.6 |  | Classify the given first order differential equations and apply it to find orthogonal trajectories. |  |  |

1: Low 2: Medium 3: High

| Integral Calculus: Evaluation of Double and Triple integrals, Change of Order of Integration, Change to polar Coordinates. <br> Beta - Gamma Functions: Definition, Relation between Beta and Gamma Functions, Duplication Formula (without proof), Simple Problems. Experiential learning using MATLAB. <br> Self-study: Applications of double integrals to find area and volume <br> 10 Hours |  |
| :---: | :---: |
| Module-4 |  |
| Laplace Transform: Definition and Existence conditions. Laplace transforms of elementary functions, Linearity and Shifting properties (statements only). Properties: s-shifting, differentiation, and Integration of transform (statements only). Transforms of Derivatives and Integrals (statements only). Laplace transforms unit - step function - problems. <br> Inverse Laplace Transform: Definition and problems [completing the square, Partial Fraction]. Solution of linear differential equations using Laplace transforms. Experiential learning using MATLAB. <br> Self-Study: Convolution theorem to find the inverse Laplace transforms |  |
| Module-5 |  |
| Numerical Methods: Solution of Algebraic and Transcendental equations <br> - Roots of equations, intermediate value property, Regula- Falsi Method, Newton - Raphson method. <br> Numerical solution of first order ordinary differential equations: Modified Euler's method, Adams Bashforth predictor - corrector method. Experiential learning using MATLAB. <br> Self-Study: 4th order Runge - Kutta method <br> 10 Hours |  |
| Course Outcomes: <br> At the end of the course the student will be able to: |  |
| 21MAT201.1 | Classify higher order linear differential equations as linear homogeneous, linear non homogeneous, with constant \& variable coefficients and solve them. |
| 21MAT201.2 | Categorize and solve partial differential equations. |
| 21MAT201.3 | Recognize heat and wave equations and solve them. |

| 21MAT201.4 | Apply the method of change of order, change of <br> variables, Beta \& Gamma functions to evaluate multiple <br> integrals. |
| :--- | :--- |
| 21MAT201.5 | Relate the concept of Laplace Transforms with <br> differential equations. |
| 21MAT201.6 | Apply the knowledge of numerical methods to solve <br> first and second order differential equations arising in <br> engineering problems. |

| Teaching hours/Week <br> (L:T:P) | $2: 1: 1$ | SEE Marks | 50 |
| Credits | 03 | Exam hours | $\mathbf{0 3}$ |

COURSE OBJECTIVES:
The objectives of this course is to

1. Demonstrate competency and understanding of the basic concepts in Physics.
2. Develop problem solving skills and implementation in technology.

## Module 1: Quantum Mechanics and Lasers

Quantum Mechanics: Introduction to black body and dual nature of matter. Introduction to Quantum mechanics. Heisenberg's uncertainty principle and its application (Non-confinement of electron in the nucleus). Wave function. One dimensional time independent Schrodinger wave equation. Significance of wave function, normalization. Particle in a box, energy eigen values of a particle in a box and probability densities.
Lasers:Review of spontaneous and stimulated processes. Einstein's coefficients (expression for energy density). Requisites of a Laser system. Condition for laser action. Principle, construction and working of $\mathrm{CO}_{2}$ laser. Applications of Laser in engineering (data storage). Numerical problems.
Self-study: Semiconductor Laser
8 Hours

## Module 2 : Material Science

Quantum free electron theory of metals: Review of Classical free electron theory-mention of failures. Assumptions of Quantum free electron theory. Mention of expression for density of states, Fermi-Dirac Statistics (qualitative), Fermi factor, Fermi level. Derivation of the expression for Fermi energy at 0 K , Success of QFET
Semiconductor Physics: Fermi level in intrinsic semiconductors, Expression for concentration of electrons in conduction band and holes in valence band, Relation between fermi energy and energy gap of intrinsic semiconductor, Expression for electrical conductivity of semiconductors.

## Superconductors:

Characteristic properties, Effect of magnetic field (Meissner effect). Classification of superconductors, Applications of superconductors - Superconducting magnets, Maglev vehicles, lossless power transmission. Numerical problems.
Self Study: Dielectrics and its applications

## Module 3: Oscillations and Waves

Free oscillations: Definition of simple harmonic motion (SHM), derivation of equation for SHM. Mechanical simple harmonic oscillators (mass suspended to spring oscillator). Equation of motion for free oscillations, natural frequency of oscillations.
Damped and forced oscillations: Theory of damped oscillations: over damping, critical \& under damping. Theory of forced oscillations and resonance.
Shock waves: Mach number, distinctions between- acoustic, ultrasonic, subsonic and supersonic waves. Properties of shock waves. Construction and working of Reddy shock tube, Applications of shock waves. Numerical Problems
Self Study: Applications of forced and damped oscillations
8 Hours
Module 4: Elastic Properties of Materials
Elasticity: Concept of elasticity, plasticity, Hooke's law, different elastic moduli, Poisson's ratio. Expression for Young's modulus (Y), Bulk modulus (K) and Rigidity modulus ( $\eta$ ) in terms of $\alpha$ and $\beta$. Relations between Y, $\eta$ and K. Limits of Poisson's ratio.
Bending of beams(Qualitative): Neutral surface and neutral plane, derivation of expression for bending moment. Bending moment of a beam with circular and rectangular cross sections. Single cantilever.
Torsion of cylinder: Expression for couple per unit twist of a solid cylinder (derivation). Torsion pendulum-expression for period of oscillation. Numerical problems.
Self-study: Factors affecting elasticity and applications of elastic materials engineering

8 Hours

## Module 5: Maxwell's Equations and Optical Fibers

Maxwell's equations: Fundamentals of vector calculus, Divergence and Curl of electric field and magnetic field (static), Gauss' divergence theorem, Stokes' theorem, Description of laws of electrostatics, magnetism, Faraday's laws of EMI. Current density and equation of continuity, displacement current. Maxwell's equations in static and time varying fields.
Optical Fibers: Propagation mechanism in optical fibers. Angle of acceptance, numerical aperture. Types of optical fibers and modes of propagation. Attenuation - causes of attenuation, attenuation coefficient, Applications - Block diagram discussion of point to point communication. Merits and demerits. Numerical problems.
Self-Study: EM waves and types of polarizations
8 Hours

## Experiential Learning:

Verification of Stefan's law
Determination of Fermi Energy
Determination of spring constant in series and parallel combinations
Determination of M.I. and Rigidity modulus using Torsional pendulum.
Determination of Numerical aperture

| Course Outco <br> able to |  |
| :--- | :--- |
| 21PHY102.1 | Describe wave particle dualism using Time independent 1-D <br> Schrodinger's wave equation, construction and working of <br> different types of lasers and its applications in different fields. |
| 21PHY102.2 | Evaluate various electrical and thermal properties of materials <br> like conductors, semiconductors and superconductors using <br> different theoretical models |
| 21PHY102.3 | Explain various types of waves and oscillations and their <br> implications |
| 21PHY102.4 | Interpret the various elastic properties of materials for <br> engineering applications. |
| $\mathbf{2 1 P H Y 1 0 2 . 5}$ | Realize the interrelation between time varying electric field and <br> magnetic field |
| 21PHY102.6 | Enumerate the properties, types and applications of optical fibers |

| :--- | :--- | :--- | :---: |
| Course Code | 21CHE102/202 | CIE Marks | 50 |
| Teaching Hours/Week (L:T:P) | $\mathbf{( 2 : 1 : 1 )}$ | SEE Marks | 50 |
| Credits | $\mathbf{0 3}$ | Exam Hours | $\mathbf{0 3}$ |

Course Learning Objectives: This course (21CHE102/202) will enable students to

1. Master the basic knowledge of engineering chemistry for building technical competence in industries, research and development.
2. To develop knowledge in the fields of electrochemistry and energy storage systems, corrosion and metal finishing.
3. To understand the importance of energy systems, environmental pollution, waste management, water chemistry, polymers and nanomaterials.

## Module-1

## Electrochemistry and energy storage systems:

Introduction, EMF of the cell, Free Energy, Single electrode PotentialDerivation of Nernst equation, Numerical problems based on Nernst Equation. Concentration cells and Numerical problems.

Reference Electrodes: Introduction, construction, working and applications of calomel electrode, ion-selective Electrodes-Glass electrode, determination of pH using a Glass electrode.

Energy Storage Systems: Introduction, Classification of batteries (primary, secondary, and reserved batteries). Construction, working, and applications of Sodium ion and Li-ion batteries. Advantages of Li- ion battery as an electrochemical energy system for electric vehicles. Recycling of Lithiumion batteries including green methods of recycling (Hydro metallurgical, Pyro metallurgical and Direct methods)
(RBT Levels: L2, L3, L4) 8 Hours

| Teaching- <br> Learning <br> Process | Electrochemistry and energy systems-chalk and talk method, <br> PowerPoint presentation, Practical topic: Determination of <br> pKa value of weak acid using a glass electrode. <br> Energy storage Systems-Power point presentation, YouTube <br> videos for Li-ion battery construction and working. <br> Self-study material: Construction and working of Lead-acid <br> battery, Leclanche cell and Silver-silver chloride electrode. <br> Solar Energy and Fuel cells-you tube videos, chalk, and talk <br> method. |
| :--- | :--- |

## Module-3

## Green Chemistry and alternative energy resources

Introduction, definition, Major environmental pollutants, Basic twelve principles of green chemistry. Various green chemical approaches Microwave synthesis, Bio catalyzed reactions, Phase transfer catalysis. Supercritical conditions for solvent-free reactions. Synthesis of typical organic compounds by conventional and green route; i) Adipic acid ii) Paracetamol
Atom economy - Synthesis of Ethylene oxide \& Methyl Methacrylate. Industrial applications of green chemistry, Numerical problems on Atom economy.
Green fuel: Hydrogen-production (Photo electro-catalytic and photocatalytic water splitting), storage and applications in hydrogen fuel cells. Construction, working and applications of Methanol-Oxygen fuel cell ( $\mathrm{H}_{2} \mathrm{SO}_{4}$ as electrolyte).
Solar Energy: Introduction, construction, working, and applications of a photovoltaic cell. Brief introduction of organic solar cells.
(RBT Levels: L3) 8 Hours

Teaching- Chalk and talk/PowerPoint presentation - Basic principles of Learning green chemistry, Hydrogen-production and applications in Process hydrogen fuel cells, Solar Energy.

Videos: Various green chemical approaches, working of Methanol-Oxygen fuel cell, working of PV cell.

Self-study material: Sono-chemical synthesis and Soldphase synthesis.

## Module-4

Environmental Pollution: Air pollutants: Sources, effects and control of primary air pollutants: Carbon monoxide, Oxides of nitrogen and sulphur, hydrocarbons, Particulate matter, Mercury and Lead. Secondary air pollutant: Ozone, Ozone depletion.

Waste Management: Solid waste, e-waste \& biomedical waste: Sources, characteristics \& disposal methods (Scientific land filling, composting, recycling and reuse).

> Water Chemistry: Introduction, sources and impurities of water; boiler feed water, boiler troubles with disadvantages -scale and sludge formation, boiler corrosion (due to dissolved $\mathrm{O}_{2}, \mathrm{CO}_{2}$ and $\mathrm{MgCl}_{2}$ ). Sources of water pollution, Sewage, Definitions of Biological oxygen demand (BOD) and Chemical Oxygen Demand (COD), determination of COD, numerical problems on COD. Chemical analysis of water: Sulphates (gravimetry) and Fluorides (colorimetry). Sewage treatment: Primary, secondary (activated sludge) and tertiary methods. Softening of water by ion exchange process. Desalination of seawater by reverse osmosis.
> (RBT Levels: L3, L4)
> 8 Hours

Teaching-
Learning Process

Chalk and talk/PowerPoint presentation - Air pollutants Primary pollutants and Secondary pollutants its sources, effects and control. Segregation steps of Waste management, Water chemistry and its treatment.
Videos: Various methods of control of pollutants and its approaches, Waste management techniques and treatment of water.

Self-study material: Green House effect, Electrodialysis, composting using bio-enzymes.

## Module-5

Polymers: Introduction, types of polymers: addition and condensation. Glass transition temperature ( $\mathrm{T}_{\mathrm{g}}$ ), Structure property relationship: crystallinity, tensile strength, elasticity \& chemical resistivity.
Synthesis, properties and applications of PMMA (plexi glass), Polyurethane and polycarbonate.
Elastomers: Introduction, synthesis, properties and applications of Silicone rubber. Adhesives: Introduction, synthesis, properties and applications of epoxy resin. Polymer Composites: Introduction, synthesis, properties and applications of Kevlar.
Conducting polymers: Introduction, mechanism of conduction in Polyaniline and applications of conducting polyaniline.
Nanomaterials: Introduction, size dependent properties (Surface area, Electrical, Optical, Catalytic and Thermal properties). Synthesis of nanomaterials: Top down and bottom up approaches,
Synthesis by Sol-gel and precipitation, Nanoscale materials: Fullerenes, Carbon nanotubes and graphenes - properties and applications.
(RBT Levels: L3)
8 Hours

| Teaching- | Chalk and talk/PowerPoint presentation - Basic <br> principles of synthesis of polymers, size dependent <br> properties of nanomaterials. Nanoscale materials. |
| :--- | :--- |
| Process | Videos: Various methods of synthesis for polymers, <br> Synthesis of nanomaterials: Top-down and bottom- <br> up approaches, Synthesis by Sol-gel, precipitation and <br> chemical vapor deposition. |
| Self-study material: Classification of polymers, <br> Advantage of synthetic rubber over natural rubber. |  |

| Course Outcomes: <br> At the end of the course the student will be able to: |  |
| :---: | :--- |
| 21CHE102.1 | Analyse Electrochemical Cells, Classical batteries, modern <br> batteries and Fuel Cells. |
| 21CHE102.2 | Explain the causes, effects and control of corrosion and modify <br> the surface properties of metal by different metal finishing <br> techniques. |
| 21CHE102.3 | lllustrate the principles of green chemistry, analyse properties <br> and application of alternate fuels. |
| $\mathbf{2 1 C H E 1 0 2 . 4}$ | Analyse different water quality parameters, Environmental <br> pollution and waste management. |
| 21CHE102.5 | Design the industrial materials by polymers for various <br> applications. |
| 21CHE102.6 | Interpret the properties, types and synthesis applications of <br> nano-materials. |

| Credits | 03 | Exam Hours | $\mathbf{0 3}$ |

## Course Learning Objectives:

1. To apply Ohm's law and Kirchhoff's laws used for the analysis of DC circuits.
2. To apply fundamentals of $\mathrm{R}, \mathrm{L}$ and C and their combinations in AC circuits.
3. To discuss three phase balanced circuits.
4. To illustrate the principle of operation, construction and performance of electrical machines such as single phase transformer, DC machines, synchronous generator and three phase induction motor.
5. To demonstrate concepts of electrical wiring, circuit protecting devices and earthing.

## Module-1

D.C. Circuits: Ohm's Law and Kirchhoff's Laws, analysis of series, parallel and series- parallel circuits excited by independent voltage sources. Power and Energy, Simulation of basic DC circuits
A.C. Fundamentals: Generation of sinusoidal voltage, frequency of generated voltage, definition and numerical values of average value, root mean square value, form factor and peak factor of sinusoidally varying voltage and current, phasor representation of alternating quantities.

08 Hours

## Module-2

Single Phase Circuits: Analysis, with phasor diagram, of circuits with R, L, C, R-L, RC, R-L-C for series and parallel configurations. Real power, reactive power, apparent power and power factor. Simulation of basic AC circuits

Three Phase circuits: Advantages of 3-phase power, Generation of 3-phase power, Three-phase balanced circuits, voltage and current relations in star and delta connections. Measurement of three phase power using two wattmeter method.

08 Hours

| Module-3 <br> Single Phase Transformers: Necessity of transformer, Construction and Principle of operation, emf equation, losses, variation of losses with respect to load, efficiency, Construction of three phase transformer and applications of transformers <br> Three Phase Induction Motors: Principle of operation, Generation of rotating magnetic field, Construction and working of three-phase induction motor, Slip and its significance. Necessity of starter, star-delta starter. Introduction to single phase induction motor and applications <br> 08 Hours <br> Module-4 <br> DC Machines: Principle of operation as generator and motor, Construction of D.C. Machine. Expression for induced emf. in generator, torque equation in motor, Applications <br> Three Phase Synchronous Generators: Principle of operation, Constructional details, <br> Synchronous speed, Frequency of generated voltage, emf equation, Applications <br> Module-5 <br> Measurement and Protection: Elementary discussion on circuit protective devices such as fuse, MCB and ELCB, electric shock, precautions against shock, Earthing, Elementary discussion on energy meter and two part tariff, Calculation of energy in terms of units. <br> Overview of Power System: Structure, components of power system, Different generation methods (only classification and introduction). |
| :---: |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

## Course Outcomes:

At the end of the course the student will be able to:

21BEE103.1
Design solutions for fundamental engineering problems using the concepts of AC and DC circuits with appropriate consideration of public health and safety.

| 21BEE103.2 | Design solutions for fundamental engineering problems <br> using the concepts of electrical machines with appropriate <br> consideration for societal needs. |
| :---: | :--- |
| 21BEE103.3 | Select appropriate resources of earthing methods and <br> modern protective devices to ensure electrical safety with an <br> understanding of limitations. |
| 21BEE103.4 | Select appropriate modern domestic wiring techniques <br> to ensure reliable power supply with an understanding of <br> limitations. |
| 21BEE103.5 | Demonstrate knowledge on engineering concepts of single <br> phase and three phase ac circuits to work in a team for <br> executing multidisciplinary projects. |
| 21BEE103.6 | Demonstrate knowledge on engineering concepts of motor and <br> generators to work in a team for executing multidisciplinary <br> projects. |

| Course Code | 21CPS103/203 | CIE Marks | $\mathbf{5 0}$ |
| Teaching Hours/Week (L:T:P) | $(\mathbf{2 : 1 : 1 )}$ | SEE Marks | $\mathbf{5 0}$ |
| Credits | $\mathbf{0 3}$ | Exam Hours | $\mathbf{0 3}$ |

## Course Learning Objectives:

1. Understand the basic concepts of Computer System and Principles of Problem Solving.
2. Gain knowledge of Algorithms and Flowchart.
3. Explain the basic concepts of C Programming Language Constructs.
4. Design and Develop Programming Skills.

## Module-1

Introduction to Computer Systems and C Programming Language
Basic functional units of Computer, Introduction to Software, Classification of Software, Compilers, Interpreters, Operating System and Types of Operating system, Networks: Types of Networks, Servers.
Fundamentals of Problem Solving: The Basic model of Computation, Main programming structure, Algorithm, Flowchart.
Introduction to C Language: Basic concepts in a C program, Constants, Variables, Volatile, Declaration and Initialization of Variables, Data types, Assignment statements.

08 Hours

## Module-2

Operators and Expressions, Decision Making Statements, Looping Statements
Operators and Expressions: Precedence and Associativity, Type conversions, Managing input/output functions, Programming examples and exercise.
Decision making: Decision making statements: if, if-else, nested if-else, cascaded if-else, switch statement, go to statement.
Looping statements: for, while, do-while, Branching statements: go to, break and continue, Programming examples and exercises.

08 Hours

| Module-3 |  |
| :---: | :---: |
| Algorithms: Searching and Sorting (Binary Search, Linear Search, Bubble Sort, Selection Sort), Programming examples and exercises. Strings: Introduction to Strings, declaration and initialization, String handling functions. <br> 08 Hours |  |
| Module-4 |  |
| Functions and Structures <br> Functions: Introduction to Functions, types of functions, definition, elements of user defined functions. Category of user defined functions, Parameter passing mechanism, Recursion, Programming examples and exercise. <br> Structures: Introduction, Definition, Declaration, Initialization, Accessing Structure Members, Programming Examples and Exercise. |  |
| Module-5 |  |
| Pointers \& Files <br> Pointers: Definition, Initialization of Pointer Variables, Accessing the Address of a Variable. Files: Defining and Opening a File, Closing a File, Input/output Operations on Files, Error Handling During I/O Operations. <br> 08 Hours |  |
| Course Outcomes: <br> At the end of the course the student will be able to: |  |
| 21CPS103.1 | Describe the basics of computer systems and C programming language. |
| 21CPS103.2 | Evaluate expressions using C operators and use looping concepts in programming. |
| 21CPS103.3 | Use arrays concepts in programming |
| 21CPS103.4 | Develop modular programs using C. |
| 21CPS103.5 | Implement programs using Structures and Pointers. |
| 21CPS103.6 | Perform operations on Files. |

1: Low 2: Medium 3: High

| ELEMENTS OF CIVIL ENGINEERING \& ENGINEERING MECHANICS |  |  |  |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
|  |  |  |  |
| Credits |  |  |  |
| 2. Explain basic concepts of Engineering Mechanics and to Analyse given coplanar concurrent force system and to estimate resultant. <br> 3. Analyze given coplanar non-concurrent force system and estimate resultant force. <br> 4. Determine Support reactions for the loaded beams. <br> 5. Locate the Centroid of regular and built-up sections and to calculate the moment of Inertia. |  |  |  |
| Module-1: Introduction to Civil Engineerin |  |  |  |
| History of Civil Engineering, Importance and Scope of different fields of Civil Engineering; Surveying, Structural Engineering, Geotechnical Engineering, Construction Management \& Technology, Environmental Engineering, Transportation Engineering, Hydraulics, Water Resources \& Irrigation Engineering, and Geoinformatics. Role of Civil Engineers in the Infrastructural development, effect of infrastructural facilities on socialeconomic development of a country. <br> Building Materials: Conventional and Alternate Building Materials |  |  |  |
| Building Materials: Conven |  | Building Mater |  |
| Module-2: Analysis of Coplanar Concurrent forces |  |  |  |
| Introduction to Engineering Mechanics: Basic concepts of idealizationParticle, Continuum and Rigid Body. Force; Systems of Forces, Basic Principles-Physical Independence offorces, Superposition, Transmissibility, Newton's Laws of Motion, Resolution and Composition of forces, Law of the parallelogram of forces, Triangle law, Polygonal law |  |  |  |
| Resultant of Coplanar Con | rent forces: Num | rical examples |  |

| Module-3: Analysis of Coplanar Non-concurrent forces |  |
| :---: | :---: |
| Moment of a Forces, Couple, Equivalent-Force Couple, Varignon's theorem, |  |
| Resultant of Coplanar non-concurrent forces: Numerical examples |  |
| Support Reactions: Types of Loads and Supports, Statically Determinate and Indeterminate beams, Support Reaction in beams, Numerical examples on support reactions for statically determinate beams (Point load, uniformly distributed \& uniformly varying loads and Moments) |  |
|  | 8 Hours |
| Module-4: Equilibrium |  |
| Friction: Types of friction, Laws of dry Friction, Limiting friction, Concept of Static and Dynamic Friction: Numerical problems on motion of single \& Connected bodies on planes, Rope and Pulley systems. <br> Equilibrium of Coplanar Concurrent forces: Free body diagrams, Equilibrium of concurrent and non-concurrent coplanar force systems, Equations of Equilibrium, Lami's theorem, Numerical examples. |  |
|  |  |
| Module-5: Centroid and Moment of Inertia |  |
| Centroid: Derivation of centroid of simple geometric sections (Rectangle, Triangle, Semi-circle and quarter-circle), Numerical examples on centroid of built-up sections. <br> Moment of Inertia: Second moment of area of plane sections from first principles, Parallel axes and perpendicular axes Theorems, Derivation of Moment of inertia of simple geometric sections (Rectangle, Triangle, Circle, Semi-circle and quarter-circle), Numerical examples on Moment of Inertia of built-up sections |  |
| Course Outcomes: At the end of the course the student will be able to: |  |
| 21CIV 104.1 | List the applications of various fields of Civil Engineering and Building Materials. |
| 21CIV 104.2 | Apply basic concepts of Engineering Mechanics and to Analyze given coplanar concurrent force system. |
| 21CIV 104.3 | Analyze given coplanar concurrent force system to calculate the resultant, member forces and support reactions. |
| 21CIV 104.4 | Make use of equations of equilibrium and Lamis theorem to solve the numerical examples related to coplanar concurrent force systems. |

| 21CIV 104.5 | Determine the coordinates of Centroid of built-up sections. |
| :--- | :--- |
| 21CIV 104.6 | Evaluate the Moment of Inertia of built-up sections about <br> given reference axes |

| Credits | $\mathbf{0 3}$ | Exam Hours | $\mathbf{0 3}$ |
| Course Learning Objectives: This Course will enable students to: |  |  |  |
| 1. Visualize p-n Junction in a semiconductor diode and use them to perform |  |  |  |
| Rectification and Regulation. |  |  |  |
| 2. Explain the working of Transistors like BJT, JFET and MOSFET. |  |  |  |
| 3. Understand the working of Operational Amplifiers and its Applications in |  |  |  |
| the design of Electronic Circuits. |  |  |  |
| 4. Understand the basics of Sensors and Transducers. |  |  |  |
| 5. Understand basics of Digital Electronics and their use in the design |  |  |  |
| of Digital Circuits like Gates, Adders, Flip-Flops and working of a basic |  |  |  |
| Communication System. |  |  |  |
| Module-1 |  |  |  |

## Module-2

Bipolar Junction Transistor - Operation, Transistor Voltages and Currents, Amplification, Common Base Characteristics, Common Emitter Characteristics, Common Collector Characteristics.
DC Load line and Bias Point, Base Bias Circuit, Collector-to-Base Bias, Voltage Divider Bias,Comparison of Basic Bias Circuits, Bias Circuit Design, BJT as an Amplifier and as a Switch.
Multisim based Simulation Experiments:
a) V-I Characteristics of a BJT
b) Turn On/Off LED using BJT as a Switch

8 Hours

## Module-3

JFET: Introduction, Construction and Operation, JFET Drain Characteristics, JFET Transfer Characteristics, Square law expression for Input/Output, Input resistance.
MOSFET: Enhancement and Depletion MOSFET- Construction, Operation, Characteristics andSymbols.
Oscillators - Barkhaunsen's criteria, RC Phase-Shift Oscillator.
Self-Study: Wein Bridge Oscillator, Crystal Oscillator.
Multisim based Simulation Experiments:
a) V-I Characteristics of a JFET/MOSFET
b) Turn On/Off LED using JFET/MOSFET as a Switch

8 Hours

## Module-4

Introduction to Op-Amp, Op-Amp Input Modes, Parameters of Ideal and Practical Op-Amps ( $\mu \mathrm{A} 741$ ). Applications of Op-Amp: Inverting amplifier, Non-Inverting amplifier, Summer, Voltage Follower, Integrator, Differentiator, and Comparator.
Sensors \& Transducers: Difference between Sensor and Transducers, Primary Measuring Elements - Selection and Characteristics.

Opto-Sensors - Photodiode, Photo Sensor, Photo Coupler.
Multisim based Simulation Experiments: Design of Inverting Amplifier, Non Inverting Amplifier,Summer and Comparator circuits.

8 Hours

## Module-5

Digital Electronics: Introduction, Number Systems, Boolean Analysis of Logic Circuits, BooleanAlgebra Theorems, Codes, Boolean Relations, Algebraic Simplifications, Digital Circuits, NAND and NOR Implementation - HalfAdder, Full Adder, Half Subtractor, Full Subtractor.

Introduction to Sequential Circuits: Latches and Flip-Flops.
Communication Engineering: Introduction, Elements of Communication Systems, Basics ofModulation.
Multisim based Simulation Experiments:
a) Realization of the Basic Gates and Universal Gates.
b) Design of JK/SR/D/T Flip-Flops using Basic Gates/Universal Gates.

8 Hours

| Course Outcomes: At the end of the course the student will be able to: |  |
| :--- | :--- |
| 21ELN104.1 | Demonstrate the working of a p-n Junction Diode and hence <br> use them to design rectifiers, regulators |
| 21ELN104.2 | Discuss the working of a Bipolar Junction Transistor and build <br> Amplifier configurations. |
| 21ELN104.3 | lllustrate and Analyze the working principles of Unipolar <br> devices like JFETs and MOSFETs. |
| 21ELN104.4 | Outline the working principles of Op-Amps and Sensors in the <br> design of various Electronic Circuits. |
| 21ELN104.5 | lllustrate and design basic building blocks of Digital Electronic <br> System. |
| 21ELN104.6 | Describe the basic Wireless Communication System. |

| Credits | 03 | Exam Hours | 03 |

## Course Learning Objectives:

1. To expose the students to standards and conventions followed in preparation of engineering drawings.
2. To make them understand the concepts of orthographic and isometric projections.
3. To develop the ability of conveying the engineering information through drawings.
4. To make them understand the relevance of engineering drawing to different engineering domains.
5. To develop the ability of producing engineering drawings using drawing instruments.
6. To enable them to use computer aided drafting tool for the generation of drawings.

## Module-1

## Introduction to Computer Aided Sketching:

Introduction, Drawing Instruments and their uses, relevant BIS conventions and standards. Lettering, line conventions, dimensioning, material conventions and free hand practising.
Computer screen, layout of the software, standard toolbar/menu and description of most commonly used toolbars and navigational tools.
Coordinate system and reference planes HP, VP, RPP \& LPP of 2D/3D environment. Selection of drawing sheet size and scale.
Commands and creation of Lines, coordinate points, axes, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints viz., tangency, parallelism, inclination and perpendicularity. (Demo only)

04 Hours

## Module-2

Introduction to orthographic projections, Definitions - Planes of projection, reference line and conventions employed. First angle and Third angle projection.
Projections of points in all the four quadrants. Projections of straight lines (located in first quadrant/first angle only), true and apparent lengths, true and apparent inclinations to reference planes (No application problems and midpoint problems).
Orthographic projections of plane surfaces (First angle projection only):
Projections of regular plane surfaces-triangle, square, rectangle, pentagon, hexagon and circle-in simple positions inclined to both the planes; planes in different positions by change of position method only. (No problems on punched plates and composite plates).

14 Hours

## Module-3

Orthographic Projections of Solids:
Orthographic projection of right regular solids - prisms and pyramids (triangle, square, rectangle, pentagon, hexagon), cones, cubes, tetrahedron. (Solids resting on HP only and no problems on freely suspended solids.)

12 Hours

## Module-4

## Isometric Projection (using isometric scale only)

Introduction, Isometric scale, Isometric projection of simple plane figures, Isometric projection of hexahedron(cube), right regular prisms, pyramids, cylinders, cones and spheres. Isometric projection of combination of two simple solids. 10 Hours

## Module-5

Conversion of Pictorial views into orthographic views
Conversion of pictorial views of simple components to orthographic views. Illustrative examples.
Introduction to 3D Modelling - Introduction to extrude, cut, revolve and other basic commands of part drawing with the help of examples. Creating 3D models of various machine components or objects, Wiring and lighting diagrams using CAD software, Basic Building Drawing, Electronic Drawing- PCB Drawings (Demo Purpose only and Internal Evaluation).

10 Hours

| Course Outcomes: <br> At the end of the course the student will be able to: |  |
| :--- | :--- |
| 21EGD105.1 | Prepare engineering drawings as per BIS conventions <br> mentioned in the relevant codes. |
| 21EGD105.2 | Produce computer generated drawings using CAD software. |
| 21EGD105.3 | Apply the knowledge of orthographic projections to represent <br> engineering information / concepts and present the same in the <br> form of drawings. |
| 21EGD105.4 | Develop isometric drawings of simple objects reading the <br> orthographic projections of those objects. |
| 21EGD105.5 | Convert pictorial views to Orthographic views and visualize <br> objects in 3D |
| 21EGD105.6 | Create 3D model of the given objects or simple machine <br> components |

## Course Learning Objectives:

1. Acquire a fundamental understanding of Mechanical Engineering in the industry and society
2. Acquire a basic understanding of the formation of steam and its industrial application.
3. Acquire a basic knowledge of renewable energy resources and basic concepts of Hydraulic turbines.
4. Acquire knowledge of various engineering materials and metal joining techniques.
5. Acquire essential experience with heat transfer devices.
6. Acquire knowledge on automobile technology in transport application and basics of Refrigeration and Air-Conditioning.
7. Acquire essential experience on basic Power transmission systems, including mechanical linkages.
8. Acquire knowledge of basic concepts on manufacturing principles and machine tools and advancement

## Module-1

Introduction to Mechanical Engineering (Overview only): Role of Mechanical Engineering in Industries and Society- Emerging Trends and Technologies in different sectors such as Energy, Manufacturing, Automotive, Aerospace, and Marine sectors and contribute to the GDP.

Steam Formation and Application: Formation of steam and thermodynamic properties of steam (Simple Problems using Steam Tables), Applications of steam in industries namely, Sugar industry, Dairy industry, Paper industry, Food processing industry for Heating/Sterilization.

Energy Sources and Power Plants: Review of energy sources; Construction and working of Hydel power plant, Thermal power plant, nuclear power plant, Solar power plant, Tidal power plant, Wind power plant.

Introduction to basics of Hydraulic turbines and pumps: Principle and Operation of Hydraulic turbines, namely, Pelton Wheel, Francis Turbine, and Kaplan Turbine. Introduction to working of Centrifugal Pump.

08 Hours

## Module-2

Properties, Composition, and Industrial Application of Engineering Materials:
Metals-Ferrous: Tool steels and stainless steels. Non-ferrous /metals: aluminium alloys. Ceramics, Glass, optical fibre glass, cermets. CompositesFiber reinforced composites, Metal matrix Composites. Smart materialsPiezoelectric materials, shape memory alloys, semiconductors, and superinsulators.

Metal Joining Processes: Soldering, Brazing and Welding: Definitions. Classification and methods of soldering, brazing, and welding. Brief description of arc welding, Oxy-acetylene welding, Introduction to TIG welding and MIG welding.

08 Hours

## Module-3

Fundamentals of IC Engines: Review of Internal Combustion Engines, 2-Strokes and 4-Strokes engines, Components and working principles, Application of IC Engines in Power Generation, Agriculture, Marine and Aircraft Propulsion, Automobile.

Insight into future mobility technology: Electric and Hybrid Vehicles, Components of Electric and Hybrid Vehicles, Drives and Transmission. Advantages and disadvantages of EVs and Hybrid vehicles.

Heat TransferApplications: Review of modes of Heat Transfer; Automobile Radiators; Condensers and evaporators of refrigeration systems; Cooling of Electrical and Electronic Devices; Active, Passive, and Hybrid Cooling.
Refrigeration and Air-Conditioning: Principle of refrigeration, Refrigeration effect, Ton of Refrigeration, COP, Refrigerants and their desirable properties. Principles and Operation of Vapor Compression and Vapor absorption refrigeration. Domestic and Industrial Applications of Refrigerator. Working Principles of Air Conditioning, Classification, and Applications of Air Conditioners. Concept and operation of Centralized air conditioning system

08 Hours

## Module-4

## Mechanical Power Transmission:

Gear Drives: Types - spur, helical, bevel, worm and rack and pinion, velocity ratio, Gear Trains and their application: simple and compound Gear Trains, Simple numerical problems on Gear trains involving velocity ratios

Belt Drives: Components of belt drive and concept of velocity ratio; Types of belt drives, Flat- Belt Drive, V-Belt Drive and Application of Belt Drives. Simple numerical problems on Belt drives involving velocity ratios.

Fundamentals of Mechanical Linkages: Definitions of Machines and Mechanisms. Applications of linear motion, oscillatory motion, rotary motion, ratchet and latches, clamping, reverse motion, pause and hesitation, loading and unloading Mechanisms.

08 Hours

## Module-5

## Fundamentals of Machine Tools and Operations:

Fundamentals of Machining and machine tools, Construction and Working Principle of Lathe, Various Lathe Operations: Turning, Facing, Taper Turning and Knurling. Construction and Working of Milling Machines and applications. Construction and working of simple Drilling Machines and applications. (Sketches of layout need not be dealt with for all machine tools).

## Introduction to Modern Manufacturing Tools and Techniques:

CNC: Introduction, components of CNC, advantages and applications of CNC, CNC Machining centres and Turning Centers, Concepts of Smart Manufacturing and Industrial IoT.
Introduction to Mechatronics \& Robotics: Concept of open-loop and closed-loop systems, Examples of Mechatronic Systems and their working principle. Robot anatomy, Joints \& links, common Robot configurations, Applications of Robotics in Material Handling, Processing, Assembly, and Inspection.

## Laboratory Exercises

## Demonstration 1:

Lathe: Parts of a lathe, Principle of working of a centre lathe, Operations on the lathe -Turning, Facing, Knurling, Thread Cutting, Drilling, Taper turning by Tailstock offset method and Compound slide swivelling method, Specification of Lathe.
Milling Machine: Principle of milling, types of milling machines, working of horizontal and vertical milling machines.

## (For Internal Assessment only -online quiz/viva)

Demonstration 2:

1. Working principle of Pelton wheel; Francis Turbine and Kaplan Turbines
2. Working principle of centrifugal pump and reciprocating pump
3. Working Principle of 4 Stroke Petrol and Diesel Engine

| Course Outcomes: <br> At the end of the course the student will be able to: |  |
| :---: | :---: |
| 21EME105.1 | Apply basic concepts to determine the quality and properties of steam and understand the working principle of hydraulic machines. |
| 21EME105.2 | Access the mechanical behavior and properties of engineering materials and various joining processes. |
| 21EME105.3 | Analyze the working of I.C engine, Hybrid Vehicles, Refrigeration and Air Conditioning. |
| 21EME105.4 | Apply the concept of power transmission and understand the fundamentals of mechanical linkages. |
| 21EME105.5 | Comprehend the working of a lathe, milling machines, CNC machines, mechatronics, robotics and understand the different operations that can be carried out on these machines. |
| 21EME105.6 | Interpret the basic concepts of smart manufacturing, Robots and industrial IoT. |

| Credits | $\mathbf{0 1}$ | Exam hours | $\mathbf{0 3}$ |
| Course Learning Objectives: |  |  |  |
| 1. | Realize experimentally, the mechanical, electrical and thermal |  |  |
| properties of materials, concept of waves and oscillations. |  |  |  |
| 2. | Design simple circuits and study the characteristics of semiconductor <br> devices. |  |  |
| EXPERIMENTS: |  |  |  |
| 1. | Determination of Young's modulus of a beam by Single cantilever |  |  |
| experiment |  |  |  |
| 2. | Study series LCR resonance and determine resonant frequency, self- |  |  |
| inductance and quality factor |  |  |  |
| 3. | Measurement of velocity of ultrasonic <br> interferometer. |  |  |
| 4. | Study of characteristics of a Transistor and calculation of output <br> resistance and amplification factor |  |  |
| 5. | Study of characteristics of a Zener diode |  |  |
| 6. | Determination of Magnetic field intensity along the axis of a circular |  |  |
| coil carrying current by Deflection method. |  |  |  |
| 7. | Helmholtz resonator to find out the unknown frequency of tuning forks |  |  |
| 8. | Calculation of Dielectric constant by RC charging and discharging |  |  |
| method. |  |  |  |

| Course Outcomes: <br> After the completion of the course, the student will be able to |  |
| :--- | :--- |
| 21PHL106.1 | To apply knowledge on strength of materials and determine the <br> different types of Elastic moduli |
| 21PHL106.2 | To interpret the principles of resonance |
| 21PHL106.3 | To realize the applications of stationary waves |
| 21PHL106.4 | To characterize the operations of semiconductor devices such <br> as photo diode, zener diode and transistors |
| 21PHL106.5 | To make measurements using laboratory equipment and per- <br> form calculations that verify physical principles |
| 21PHL106.6 | To apply basic principles of optics in determination of physical <br> properties of light |

| Teaching Hours/Week (L:T: | (0:0:2) | SEE Marks | 50 |
| Credits | 01 | Exam Hours | 03 |
| Course Learning Objectives: <br> To provide students with practical knowledge of <br> 1. Handling different types of instruments for analysis of materials using small quantities of materials involved for quick and accurate results. <br> 2. Carrying out different types of titrations for estimation of concerned in materials using comparatively more quantities of materials involved for good results. |  |  |  |
| PART-A |  |  |  |
| Instrumental Experiments <br> 1. Potentiometric estimation of FAS using standard $\mathrm{K}_{2} \mathrm{Cr}_{2} \mathrm{O}_{7}$ solution. <br> 2. Conductometric estimation of acid mixture. <br> 3. Determination of Viscosity co-efficient of the given liquid using Ostwald's viscometer. <br> 4. Colorimetric estimation of copper. <br> 5. Determination of pKa of the given weak acid using pH meter. |  |  |  |
| PART-B |  |  |  |
| Volumetric Experiments <br> 1. Estimation of Total hardness of water by EDTA complexometric method. <br> 2. Estimation of CaO in cement solution by rapid EDTA method. <br> 3. Determination of percentage of Copper in brass using standard sodium thiosulphate solution. <br> 4. Determination of COD of waste water. <br> 5. Estimation of Iron in haematite ore solution using standard $\mathrm{K}_{2} \mathrm{Cr}_{2} \mathrm{O}_{7}$ solution by external indicator method. |  |  |  |
| Beyond the syllabus: |  |  |  |
| 1. Flame photometric estimation of sodium and potassium. <br> 2. Determination of Alkalinity of given water sample. |  |  |  |

| Course Outcomes: <br> At the end of the course the student will be able to: |  |
| :---: | :--- |
| $\mathbf{2 1 C H L 1 0 6 . 1}$ | Evaluate the concentration of material using different <br> instruments accurate results. |
| $\mathbf{2 1 C H L 1 0 6 . 2}$ | Compare the viscous nature of any liquid with water |
| $\mathbf{2 1 C H L 1 0 6 . 3}$ | Analyse quantitatively the concerned elements by <br> Instrumental techniques. |
| $\mathbf{2 1 C H L 1 0 6 . 4}$ | Analyse the water quality parameters like total hardness and <br> chemical oxygen demand. |
| $\mathbf{2 1 C H L 1 0 6 . 5}$ | Perform different types of titrations for estimation of <br> concerned materials. |
| $\mathbf{2 1 C H L 1 0 6 . 6}$ | Employ external indicators for volumetric analysis. |

| Sl.No. | Experiments |  |  |  |
| 1 | Verification of KCL and KVL for DC circuits using simulation and hardware circuit. |  |  |  |
| 2 | Measurement of energy, current, power and power factor of incandescent lamp, fluorescent lamp, and LED lamp. |  |  |  |
| 3 | Measurement of Resistance, inductance of choke coil. |  |  |  |
| 4 | Determination of phase and line quantities in three phase star and delta connected loads |  |  |  |
| 5 | Measurement of three phase power using two wattmeter method. |  |  |  |
| 6 | Two way and three way control of lamp and formation of truth table. |  |  |  |
| 7 | Study of fuse characteristics and demonstration of Miniature Circuit breakers |  |  |  |
| 8 | Demonstration of house wiring and Measurement of Earth Resistance |  |  |  |
| 9 | Measurement of efficiency of single phase transformer by load test |  |  |  |
| 10 | Study of Torque current characteristics of DC shunt motor |  |  |  |

| Course Outcomes: At the end of the course the student will be able to: |  |  |  |
| :--- | :--- | :--- | :--- |
| 21BEL107.1/207.1 | Identify the common electrical components and <br> measuring instruments used for conducting experiments <br> in the electrical laboratory. |  |  |
| 21BEL107.2/207.2 | Compare power consumed by lamps and power factor <br> of lamps. |  |  |
| 21BEL107.3/207.3 | Development of a circuit to Investigate the impedance <br> of an electrical circuit and power consumed in a 3-phase <br> load. |  |  |
| 21BEL107.4/207.4 | Develop and demonstrate two way and three-way control <br> of lamps and by verifying the truth table. |  |  |
| 21BEL107.5/207.5 | Demonstrate the characteristics of choke coil and single- <br> phase transformer using modern tools. |  |  |
| 21BEL107.6/207.6 | Develop and understand the characteristics of DC shunt <br> motor |  |  |

## C PROGRAMMING LABORATORY

| Course Code | 21CPL107/207 | CIE Marks | $\mathbf{5 0}$ |
| :--- | :--- | :--- | :--- |
| Teaching Hours/Week (L:T:P) | (0:0:2) | SEE Marks | $\mathbf{5 0}$ |
| Credits | $\mathbf{0 1}$ | Exam Hours | $\mathbf{0 3}$ |

## Course Learning Objectives:

1) To practice developing flowcharts and algorithms.
2) Familiarize the use of C Compiler and constructs of C Programming.
3) To practise usage of various constructs such as branching and looping.
4) To be able to identify and rectify syntax and logical errors during coding.
5) To familiarize the processes of debugging and execution.

## Practise Programs:

1. Familiarization with programming environment, concept of naming conventions, editing, compilation, execution and debugging of C Programs
2. Calculation of simple interest.
3. Check for the palindrome.
4. Finding the largest of given three positive integers using if- then- else structures.

## Descriptions:

- The laboratory should be preceded or followed by a tutorial to explain the approach or algorithm to be implemented for the problems given. Ensure that no built-in functions are used.
- Algorithm/Flowchart to be written for all experiments.
- Code should be traced using minimum two test cases which should be recorded in the manual.

## Laboratory Programs:

PART- A
1 Write a C program to simulate a simple calculator that performs arithmetic operations like addition, subtraction, multiplication, and division only on integers. Error messages should be reported, if any attempt is made to divide by zero. (Using switch statement)
2 Write a C program to find and output all the roots of a given quadratic equation, for non-zero coefficients. (Using nested/if...else statement).

3 Write a C Program to print prime numbers in a given range.

| 4 | Write a C program to input N real numbers in ascending order into <br> a single dimension array. Conduct a binary search for a given key <br> integer number and report success or failure in the form of a suitable <br> message, also print the position. |
| ---: | :--- |
| 5 | Write C Program to read two matrices A (M x N) and B (P x Q) <br> and compute product of A and B after checking compatibility for <br> multiplication. Output the input matrices and the resultant matrix with <br> suitable headings and format. |
| 6 | Write a C program to input N integer numbers into a single dimension <br> array. Sort them in ascending order using bubble sort technique. Print <br> both the given array and sorted array with suitable headings. |
| 7 | Write C functions to implement string operations such as string length, <br> compare, concatenate and string copy with appropriate messages. |
| 8 | Implement structures to read, write, and compute the average- marks <br> and the students scoring above and below the average marks for a class <br> of N students. |
| 9 | a) Implement Recursive functions to generate Fibonacci sequence. <br> b) Write a Recursive C function to find the factorial of a number. |
| 10 | a) Implement addition of array elements using Pointers. <br> b) Write a C program to swap two variables using pointers. |
| PART- B-Problem based learning |  |
| Case Study: Students are given real time applications (like Banking |  |
| management, Railway/ Bus ticket reservation, Hotel management, Traffic |  |
| signal generation, Employee management...etc) to study and provide |  |
| solutions to the same. |  |

## Course Outcomes:

At the end of the course the student will be able to:

| 21CPL107.1 | Use vi editor to create, compile and execute programs by <br> rectifying all types of errors. |
| :--- | :--- |
| 21CPL107.2 | Write algorithms, flow charts and programs using decision <br> making/looping constructs. |
| 21CPL107.3 | Write programs to solve problems using recursive and iterative <br> constructs |
| 21CPL107.4 | Write programs to solve problems using strings, arrays and <br> functions constructs |

| 21CPL107.5 | Use structures and pointers constructs for finding the solutions <br> to the problems. |
| :--- | :--- |
| 21CPL107.6 | Demonstrate concepts learnt to solve real-life problems, to <br> communicate in verbal/written form and document the pro- <br> grams executed. |

| Teaching Hours/Week (L:T:P) | $(0: 1: 1)$ | SEE Marks | $\mathbf{5 0}$ |
| Credits | 01 | Exam Hours | $\mathbf{0 2}$ |

Course Learning Objectives:

1. To enable the learner to communicate effectively in real life situations.
2. To review English grammar effectively for study purposes across the curriculum.
3. To enhance English vocabulary and language proficiency.
4. To achieve better writing and presentation skills.

## Module-1

Fundamentals of communication skills, Barriers to effective communication, Types of communication, Interpersonal communication skills. 4 Hours

## Module-2

Subject Verb Agreement, Sequences of tenses, Active and Passive, Reported speech, Articles, Preposition.

4 Hours

## Module-3

Vocabulary, One word substitutes, Confused words, Phrasal Verbs, Idioms and Phrases, Analogies. 4 Hours

## Module-4

Precis writing, Cloze test, Theme detection, Technical report writing, Sentence improvement, Common errors in writing and speaking,

4 Hours

## Module-5

Group discussion, Extempore speaking, Presentation skills.
4 Hours

| Course Outcomes: At the end of the course the student will be able to: |  |
| :--- | :--- |
| 21ENG108.1 | To articulate the nature and style of communication skills |
| 21ENG108.2 | To illustrate the different ways in which grammar has been <br> described. |

| 21ENG108.3 | To summarize English vocabulary and language proficiency. |
| :--- | :--- |
| 21ENG108.4 | To enhance sensible writing skills. |
| 21ENG108.5 | To be aware of their strengths and weakness as language <br> learners |
| 21ENG108.6 | To enhance competence in the four modes of literacy : Writ- <br> ing, Reading, Speaking and listening. |

| ABILITY ENHANCEMENT COURSE - II <br> (SKILL AND ENTREPRENEURSHIP DEVELOPMENT COURSE - II) |  |  |  |
| :---: | :---: | :---: | :---: |
|  |  |  | 50 |
|  |  |  |  |
| Credits |  | Exam Hour |  |
| Course Learning Objectives: <br> 1. Apply the advanced Manufacturing Processes in their Project work <br> 2. Articulate embedded electronics and programming <br> 3. Design the data acquisition and control strategies <br> 4. Use of Internet of Things <br> 5. Appraise the importance of design thinking, new ways of thinking and innovation cycle for creating innovative products |  |  |  |
| Advanced Fab Lab-II: <br> Computer controlled cutting and machining - CNC router, PCB design and fabrication, Vinyl Cutter, Power tools <br> 8 Hours |  |  |  |
| Embedded Electronics: <br> Electronics design, Embedded programming, Input/output devices, Interface and application programming, Networking and communication, experiments and testing of oscilloscope, spectrum and logic analyser, wave form generators and networking devices. <br> 8 Hours |  |  |  |
| Data Acquisition System and Internet of Things: <br> Demonstration to Data Acquisition System, working of sensors and controllers <br> 2 Hours |  |  |  |
| Design thinking -II: <br> Process of Product Design - Process of Engineering Product Design, Design Thinking Approach, Stages of Product Design, Examples of best product designs and functions, Assignment - Engineering Product Design <br> Prototyping \& Testing - What is Prototype? Why Prototype? Rapid Prototype Development process, Testing, Sample, Example, Test Group Marketing <br> Celebrating the Difference - Understanding Individual differences \& Uniqueness, Group Discussion and Activities to encourage the understanding, acceptance and appreciation of Individual differences <br> Design Thinking \& Customer Centricity - Practical Examples of Customer Challenges, Use of Design Thinking to Enhance Customer Experience, Parameters of Product experience, Alignment of Customer Expectations with Product Design, Feedback loop |  |  |  |

| Course Outcomes: |  |
| :--- | :--- |
| At the end of the course the student will be able to: |  |
| 21AEC209.1 | Perform advanced manufacturing operations |
| 21AEC209.2 | Articulate embedded electronics and programming |
| 21AEC209.3 | Design the data acquisition and control strategies |
| 21AEC209.4 | Use of Internet of Things |
| 21AEC209.5 | Apply design thinking, new ways of thinking and innovation <br> cycle for creating innovative products |
| 21AEC209.6 | Inculcate the team work and communication skills |

| INDUSTRY ORIENTED TRAINING - I (MATHEMATICAL APTITUDE SKILLS) |  |  |  |
| :---: | :---: | :---: | :---: |
| Course Code | 21ITM110/210 | CIE Marks | 50 |
| Teaching Hours/Week (L:T:P) | (0:2:0) | SEE Marks |  |
| Credits |  | Exam Hou |  |
| Course Learning Objectives: <br> 1. To equip the students with basic concepts and tools of Mathematics to solve placement aptitude papers. <br> 2. To enhance the problem solving skills and improve the basic mathematical skills to help students preparing for competitive examinations. |  |  |  |
| Module-1 |  |  |  |
| Number System: Various types of Numbers; Tests of Divisibility; HCF and LCM; Roots and Squares. <br> Algebra: Identities; BODMAS Rule; Logarithms; Indices; Number Series; Simple Interest and Compound Interest. |  |  |  |
| Module-2 |  |  |  |
| Time and Work: Facts and Formulae; Group work; Pipes and Cisterns. Time and Distance: Basics of Time, Speed and Distance; Average journey speed; Relative Speeds; Boats and Streams. |  |  |  |
| Module-3 |  |  |  |
| Average, Percentage, Age problems: Average; Concept of percentage, Results on Population and Depreciation; Problems on ages. <br> Profit and Loss: Profit and Loss formulae; Percentage of profit and loss, Discount. |  |  |  |
| Module-4 |  |  |  |
| Permutations, Combinations, Probability: Factorial Notation; Permutations; Combinations; Random Experiment; Probability of Occurrence of events. Ratio, Proportion, Partnership: Ratio; Ratio in terms of Percentage, Proportion, Mean Proportion; Variation; Partnership. <br> 4 Hours |  |  |  |
| Module-5 |  |  |  |
| Geometry: Pythagoras theorem - Heights and Distances; Area; Volume; Surface Area. <br> Clock and Calendar: Problems related to clocks; Calendars; odd days; leap year; Day of the week related to Odd days. <br> 4 Hours |  |  |  |

| Course Outcomes: <br> At the end of the course the student will be able to: |  |
| :--- | :--- |
| 21ITM110/210.1 | Apply the basic concepts of quantitative abilities related <br> to Number system. |
| 21ITM110/210.2 | Evaluate time related problems by knowing the relationship <br> between time/speed/distance or time/work. |
| $\mathbf{2 1 I T M 1 1 0 / 2 1 0 . 3}$ | Apply the concepts of average, percentage, appreciation <br> and depreciation in real life problems |
| 21ITM110/210.4 | Solve application problems involving permutations and <br> combinations. |
| $\mathbf{2 1 I T M 1 1 0 / 2 1 0 . 5}$ | Apply Ratio and Proportion concepts to solve the <br> partnership problems where people share the ownership. |
| $\mathbf{2 1 I T M 1 1 0 / 2 1 0 . 6}$ | Apply the geometrical concepts in real- world applications. |
